

ROUNDWORM

Roundworms (nematodes) are important endoparasites, causing clinical disease and lost production in young sheep.

Most roundworms follow a similar life cycle.

DEC JAN FEB MAR APR MAY JUN JUL AUG SEP OCT NOV

Parasitic gastroenteritis (PGE)

Roundworm control is inevitably complex. Exposure of naïve animals to infective L3 larvae on pasture can be minimised:

- by finishing lambs quickly, before the challenge becomes production limiting;
- by grazing susceptible sheep only on 'safe' pasture, thereby evading an infective L3 challenge;
- or by using anthelmintic drugs to suppress pasture larval contamination.

Effective pharmaceutical drugs are, and will always be, essential for the treatment of clinical cases of PGE.

The major gastrointestinal nematode parasites (worms) of UK sheep are the trichostrongyle worms:

- *Teladorsagia* (formerly *Ostertagia*) *circumcincta* the 'brown stomach worm', found in the abomasum
- *Trichostrongylus vitrinus* (or *Trichostrongylus colubriformis* in southern Britain) the 'black scour worm' found in the proximal small intestine
- *Haemonchus contortus* (the 'barber's pole worm')
- *Nematodirus battus*

TREATMENT OPTIONS

CYDECTIN 0.1% Oral Solution for Sheep

Treats and prevents common sheep roundworms including lungworm and the treatment of *Nematodirus*. Allows up to 5 weeks persistency

Zoetis SHEEP 15ml drench applicator

- 15ml drench applicator
- Variable dosing
- Tubing with anti-kink springs

CYDECTIN 20mg/ml LA Solution for Injection for Sheep

- CYDECTIN LA has up to 111 days persistent action against worms
- A single subcutaneous injection treats and affords 60 days protection against scab

Zoetis SHEEP 5ml Accurus™ Injector

- 15ml multi-dose syringe variable 1-5ml
- 2 x 18g 1/2" needles
- Vented draw-off tube
- Operating instructions

STARTECT Dual Active Oral Solution

- Enhanced efficacy against resistant worms
- Delayed resistance development
- 14 days meat withhold
- Suitable for routine dosing
- Suitable as a 1 dose quarantine treatment and as a knock out drench

Zoetis SHEEP 15ml Drench Applicator

- 15ml drench applicator
- Variable dosing
- Tubing with anti-kink springs

Product information: CYDECTIN 0.1% W/V ORAL SOLUTION FOR SHEEP contains moxidectin. For the treatment and prevention of infections caused by parasites sensitive to moxidectin. [POM-VPS] [S-M] CYDECTIN 20 MG/ML LA SOLUTION FOR INJECTION FOR SHEEP contains moxidectin. For the treatment and prevention of mixed infections of gastrointestinal nematodes, respiratory nematodes and certain arthropod parasites in sheep. [POM-VPS] [S-M] STARTECT DUAL ACTIVE ORAL SOLUTION FOR SHEEP contains derquantel and abamectin. For the treatment and control of mixed gastrointestinal nematode infections and associated diseases of sheep. [POM-V] [S-M] [S-SI]
