

Disclaimer and Further Information

The Zoetis Drench Cost Calculator is an educational tool designed to allow prescribers and professional keepers of animals to make informed decisions regarding anthelmintic protocols. Zoetis recommends that anthelmintics are used as part of an integrated parasite control plan, such as those recommended by SCOPS (www.scops.org.uk).

Efficacies to anthelmintic products will vary and the examples utilised in this application are drawn from UK study data, these values are subject to change and it is recommended to determine the anthelmintic efficacy status of the individual farm.

Assumptions made are that growth performance decrease is linear with decreasing efficacy of drench due to greater survival of gastrointestinal nematodes. Based on ; Coop et al 1982 J Agric Sci 98, 247-255, Geurden et al Veterinary Parasitology 205 (2014) 405–407 and Miller et al Veterinary Parasitology doi:10.1016/j.vetpar.2011.11.063.

The Zoetis Drench Cost Calculator does not provide, and is not intending to provide medical advice, treatment or judgment. The content of this program is not meant to be a substitute to the clinical judgment of your veterinary surgeon or advisor.

Zoetis herewith does not provide any guarantee that this application will result in any commercial benefit to the user.

CYDECTIN 0.1% W/V ORAL SOLUTION FOR SHEEP contains moxidectin. For the treatment and prevention of infections caused by parasites sensitive to moxidectin. POM-VPS

CYDECTIN 1% Injectable Solution for Sheep contains moxidectin. For the prevention and treatment of psoroptic mange (scab) in sheep. For the treatment and control of infections caused by moxidectin sensitive strains of parasites. POM-VPS

CYDECTIN 20 MG/ML LA SOLUTION FOR INJECTION FOR SHEEP contains moxidectin. For the treatment and prevention of mixed infections of gastrointestinal nematodes, respiratory nematodes and certain arthropod parasites in sheep. POM-VPS

CYDECTIN TRICLAMOX 1 MG/ML + 50 MG/ML ORAL SOLUTION FOR SHEEP contains moxidectin and triclabendazole. For the treatment of mixed nematode and fluke infections in sheep, caused by moxidectin and triclabendazole sensitive parasites in sheep. POM-VPS

STARTECT DUAL ACTIVE ORAL SOLUTION FOR SHEEP contains derquantel and abamectin. For the treatment and control of mixed gastrointestinal nematode infections and associated diseases of sheep. POM-V
